

## **Oxi-King Wins New Product Award**

The Oxi-King Water Treatment System has been awarded the New Product of the Year Award in the hazmat safety category from Occupational Health and Safety Magazine. Oxi-King disinfects water in cooling towers and process cooling applications with a system that utilizes light weight, pre-filled BCDMH pacs. Service techs enjoy less exposure to the chemical and less strain in transporting BCDMH within facilities. The convenient Brom Pac is inserted into the Oxi-King System that precisely meters the disinfectant to meet each application's needs. The system's proprietary erosion design wets a small amount of BCDMH at a time and the ten setting control dial offers flexible and precise adjustments to meet the load or residual required. Oxi-King can output up to 4.5 pounds per day and will handle up to 500,000 gallons maintaining a 0.5 ppm residual at no load. With its robust construction, Oxi-King also offers a ten year warranty. Oxi-King is manufactured by King Technology Inc. ([www.Oxi-King.com](http://www.Oxi-King.com)) and distributed by Solid State Technologies ([www.solidstatetech.net](http://www.solidstatetech.net)).
